

## The tip of the iceberg The hidden value of simplicity

**Stop that thumb, breathe, read.** In a world where everything flows fast and the succession of content is a flood, stop for a moment and let these lines tell you about something beyond numbers, awards and technology: a journey that turns complexity into simplicity. *Because, in the end, that is what we do every day.*

This is not a self-celebration, nor is it a list of accomplishments or a time to puff up our chests with pride (although, let's face it, some pride is there). It is a reflection on how each step taken over the years, each project initiated or completed, has been a building block toward a

larger goal: **to make simple what for many is complicated, almost to the point of seeming impossible.**

Says Yuval Noah Harari, "*Complexity creates extraordinary opportunities, but the real challenge is to manage it without getting trapped by it.*"

Behind our application, what customers see as a simple and intuitive solution, lies a world of technologies, processes and strategies that remain invisible to those who use it. **And that's okay, because simplicity doesn't need to be noticed;** simplicity needs to work, period. As Steve Jobs said, "*Simplicity can be harder than complexity-you have to work hard to make your thinking clean and simple.*"

Over the course of 2024 we have pursued projects that tell just that: relentless and often submerged work, but always geared toward ensuring that our customers have a solution that meets their needs and beyond. We have invested in platform security, adopted advanced monitoring and protection systems, recertified our Information Security Management System to the latest standards, demonstrating our commitment to reliability and transparency.

We have embraced new technologies, such as process automation and artificial intelligence, to further simplify chemical information management, expanding opportunities for our customers. And we have seen our international presence grow, with new partners and customers choosing us not only for product quality, but for the value we bring to their daily operations.

We were also privileged to see our efforts recognized with a major award celebrating **sustainable innovation**. An achievement that is not just a trophy to show off, but a tangible sign of our concrete contribution toward a more responsible and conscious future. This recognition inspires us to do even better, to show that technology and sustainability must walk together to create solutions that truly make a difference.

Each project is a piece of a larger puzzle: a way to build something that is not limited to today, but looks steadily toward tomorrow. We believe in a simple principle: **value lies not only in what we see, but also in everything that makes what is visible possible and functional.**

So, too, every solution we offer is never just what you see-it is the result of vision, commitment, and an unwavering belief in technology and the value of simplicity.

And that is exactly what we do every day: **we listen carefully to our clients' needs, we immerse ourselves in their needs to offer solutions that not only simplify their work, but make it safer, more efficient, and more sustainable.** Every project is a dialogue, every innovation a step forward to help those who rely on us focus on what really matters. In a fast-paced world, true innovation is not just technical-it is the ability to create value without complication. We are committed to being a partner that simplifies without compromise.

Because, in the end, what really matters is helping our clients focus on their success.
